Visited in August 1976 to collect brachiopods from the Eocene (Castle Hayne Formation).

See Cooper 1988 for some brachiopods (Tertiary) of the East Coast of the U.S.

Unofficial trip
In 1968 the US NPL received an important fossil: a huge clam from the Silurian of Ohio given by a youngster from Woodville.

Cooper visit Woodville in Fall of 1968, met the young man and was taken to the quarry that produced the clam. The quarry is in Silurian rock, a dolomite replete with unusually large brachiopods.

The quarry is normally forbidden to visitors but the boy’s Grandpa, quarry foreman, took Cooper in.

I do not recall the name of the young man.
Which can be obtained from the label with the fossil and the accession record. Dr. Pajeta could help.

Sorry.
